1) Introduction

This document is a user guide to provide an overview to the user about the HMIS system and its modules so that user can get help in using and understanding the flow of its modules.

1.1) Purpose

The purpose of this document is to provide help to the users in understanding the need and usage of this app and using the Laboratory Module of HMIS. This user manual will guide the users in understanding the step wise flow of laboratory module and all its components.

1.2) Scope

This document covers the complete flow of HMIS Laboratory Module. Through this module users working in the laboratory would be able to use a computerized system and their whole documentation work would be done through HMIS laboratory Module. Users present in the laboratory will perform certain steps to issue computerized test reports and slips instead of manually writing on pads.

2) Flow of Laboratory Module

2.1) Sample Collection

User present in the OPD section generates a slip of tests assigned by a doctor. The record of the patient comes to the laboratory module. The user present in the lab login his account and enters in the laboratory module. The user present in the laboratory click on the tab named sample collection. The tab named sample collection is the first step and from there he can view the number of patients referred to lab. The user can see a button named search. By clicking on search button there generates a list of patients referred to lab for test. There is a link named receive sample. By clicking on receive sample a new page is opened with a test name and a save button.
